BHAVYA ANTIYA

Pennsylvania | (571) 456-8215 | bhavyaantiya11@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Software Engineer with 4+ years of experience designing, developing, testing, and deploying scalable enterprise applications and distributed systems. Proficient in Java, Python, JavaScript, TypeScript, Spring Boot, React, Angular, Node.js, RESTful APIs, GraphQL, and microservices architecture. Experienced in building end-to-end application features, integrating relational and NoSQL databases, and developing event-driven systems using Kafka. Skilled in AWS, GCP, Docker, Kubernetes, CI/CD pipelines, automated testing, and application performance optimization. Strong background in delivering reliable software solutions, troubleshooting production issues, and collaborating with cross-functional teams in Agile environments.

TECHNICAL SKILLS

- **Languages**: Java, Python, JavaScript, TypeScript, SQL
- **Backend & APIs**: Spring Boot, Spring Cloud, Node.js, Express.js, Flask, Django, REST APIs, GraphQL, OpenAPI, Microservices
- **Frontend Technologies**: ReactJS, Angular, HTML5, CSS3, Thymeleaf
- **Messaging & Distributed Systems**: Apache Kafka, Kafka Streams, GCP Pub/Sub, Event-Driven Architecture, Asynchronous Processing
- **Databases**: PostgreSQL, MySQL, MongoDB, DynamoDB, Cosmos DB, BigQuery
- **Cloud & DevOps**: AWS, GCP, Kubernetes, Jenkins, GitHub Actions, CI/CD, Terraform, Rancher, Docker
- **Testing, Security & Monitoring**: Unit Testing, Integration Testing, TDD, OAuth, JWT, Git, SonarQube, Prometheus, Grafana
- **Methodologies**: Agile/Scrum, SDLC

PROFESSIONAL EXPERIENCE

Walmart Global Tech | *Software Developer* **Jan 2024 - Sep 2026**

- Developed and maintained scalable **Java and Spring Boot microservices**, building RESTful and GraphQL APIs supporting 50+ feed types across seller management, inventory, pricing, fulfillment, and item lifecycle workflows for Walmart's enterprise marketplace platform.
- Developed an internal **feature-flag management interface using Thymeleaf and Java/Spring Boot**, implementing configuration CRUD operations, context-based targeting rules, and migration from CCM YAML configurations to Unleash.
- Engineered event-driven seller lifecycle workflows using **Java, Apache Kafka, Apache Spark, and Cosmos DB**, automating terminated-seller processing and coordinating downstream item removal, transfer, and lifecycle operations.
- Designed asynchronous Kafka-based processing for high-volume operations, supporting 5,000-item batches with retry mechanisms, exponential backoff, idempotency checks, and dead-letter queues to improve fault tolerance and processing reliability.
- Optimized data processing and database interactions using **BigQuery, Cosmos DB, SQL, JDBC batch operations, and pagination**, supporting large-scale data workflows with 500-record batch chunks and efficient query execution.
- Designed and implemented secure API workflows with input validation, structured exception handling, file upload controls for files up to 250 MB, and standardized response models to prevent malformed requests and ensure consistent error handling.
- Reduced deployment failures by **20%** and mean time to recovery by **15%** through enhancements to **Docker and Kubernetes-based CI/CD pipelines-**, implementing automated health checks, canary deployments, Prometheus and Grafana monitoring, and integration and contract testing.

VinTech | *Software Engineer* **Jan 2020 - Jul 2021**

- Developed and maintained **full-stack logistics and IoT applications** using React.js, JavaScript, Node.js, Express.js, and PostgreSQL, supporting real-time fleet monitoring, route management, dispatch operations, and business-critical workflows.
- Built interactive **React.js dashboards** integrated with Flask-based REST APIs and PostgreSQL, enabling users to monitor vehicle telemetry, manage dispatch activities, and track operational exceptions.
- Modernized a monolithic application into scalable, event-driven microservices using **Node.js, Kafka Streams, and GCP Pub/Sub**, improving system maintainability, asynchronous communication, and processing efficiency.
- Designed and implemented RESTful APIs, database-backed workflows, and secure application integrations using **PostgreSQL, SQLite, OAuth2, and TLS**, supporting reliable communication between frontend applications and backend services.
- Containerized and deployed applications using **Docker, Kubernetes, and Rancher**, implementing CI/CD workflows to streamline deployments and improve application scalability and reliability.
- Implemented automated notification workflows using **AWS SES** and strengthened application quality through unit testing, integration testing, code reviews, and Agile/Scrum development practices.

PROJECTS

Campus Feedback and Review System | Angular, Java, Spring Boot, REST APIs

- Developed a full-stack web application using **Angular and Spring Boot**, implementing RESTful APIs, frontend-backend integration, and role-based functionality for student feedback and reviews.
- Optimized backend service logic, API request handling, and database access patterns to improve application responsiveness and maintainability.

Business Agency Web Application | React.js, Node.js, Express.js, MongoDB, AWS

- Developed a full-stack business application using **React.js, Node.js, Express.js, and MongoDB**, implementing frontend interfaces, RESTful APIs, and database-backed business workflows.
- Built payment-related microservices and integrated **AWS Lambda and DynamoDB** for cloud-based backend functionality.

EDUCATION

Indiana Wesleyan University **Jul 2026 - Present**
Master of Science in Computer Information Systems – Artificial Intelligence Specialization

George Mason University **Aug 2021 - May 2023**
Master of Science, Computer Science

University of Mumbai **Jun 2017 - Jun 2021**
Bachelor of Engineering, Information Technology

CERTIFICATION

- AWS Certified Solutions Architect – Associate
